Dear Hiring Manager ,

I am an experienced software engineer currently working on a League of legends matchup website using React/Redux and Node.js. I have excellent knowledge of JavaScript, HTML5 and CSS3. I also have a strong knowledge of React Node.js and Java. I am also able to learn new things very quickly.

I am very interested in the software engineering position open at Kard Financial , Inc. I am very familiar with what your company is doing and would love to contribute to the team with my development skills in any way I can. In my previous position as a software engineer at A&I Broadway Realty I successfully improved the customer support chat, and added multiple features to their API and web platform.

With my technical experience and learning capability I am confident I will be an asset to your organization. Thank you for your consideration!

Sincerely ,

Leo Bogod
